SUMMARY

Full-Stack Developer focused on building modern, responsive web applications using React, Next.js, Node.js, Express.js. Experienced in developing RESTful APIs, implementing JWT-based authentication, managing application state, integrating Stripe payments, and working with database and content management systems. Passionate about building maintainable software, solving user problems, and developing secure, reliable web applications.

SKILLS

Languages: JavaScript, TypeScript | Frontend: React, Next.js Tailwind CSS | Backend: Node.js, Express,Next.js | Databases: MongoDB, PostgreSql, Redis | Tools & Deployment: Git, GitHub, Vercel, Render

PROJECTS

ShopNest — Full-Stack E-commerce Application

MERN Stack Project | Personal Project / Git- shopnest-Git / Live- shopnest-Live

- Used React.js for seamless frontend and express.js for backend API's.
- Developed REST API endpoints for products, authentication, orders, payments ,JWT and cookies; handled validation/error cases.
- Redux for cart and authContext for login logout , authme.
- Integrated MongoDB / Redis / Stripe / Cloudinary — keep only what is implemented and working.
- Deployed to Render and configured environment variables, production serving, logging or monitoring.

YC Directory — Full-Stack

NEXT js Project | Personal Project | Git- yc-Git | live- yc-Live

- Developed a full-stack web application that enables entrepreneurs to showcase startup ideas and allows users to discover and explore startup pitches
- Built a modular application structure using Next.js App Router, reusable React components, and TypeScript.
- Implemented GitHub OAuth authentication using Auth.js to support user sign-in.
- Integrated Sanity CMS for structured content management and dynamic startup content.
- Deployed the application on Vercel and integrated Sentry for application error monitoring.

Amazon Clone — React frontend

React js Project | Personal Project | Git- amazon-Git | live- amazon-live

- Developed a React-based e-commerce frontend inspired by Amazon, using reusable components and a modern JavaScript development workflow.
- Used Redux Toolkit and React Redux for centralized application state management.
- implemented client-side navigation using React Router to organize application pages and user flows.
- Integrated Axios for HTTP requests and Tailwind CSS 4 for responsive interface styling.
- Used Swiper to support interactive, carousel-style content and Vite for development and production builds.

Spoify Clone — React frontend

React js Project | Personal Project | Git- spotify-Git | live- spotify-live

- Developed a Spotify-inspired music web interface using React and reusable UI components.
- Implemented client-side navigation using React Router to organise pages and user navigation flows.
- Used Tailwind CSS 4 to build and style the interface, with custom scrollbar styling for an improved browsing experience.
- Integrated Swiper to create interactive, touch-friendly carousel components.

EDUCATION

Master of Information Technology— CQ university | 2025
